

## MFJ971 ATU

The MFJ-971 is a compact 200 watt portable QRP tuner. The MFJ-971 is also a perfect mate for any of today's ultra-compact SSB radios. It provides a convenient cross-needle type SWR/Wattmeter and features a special user-selectable 6 watt range for QRP operation.

The T-match tuner covers 1.8-30 MHz and tunes almost any coax, wire, or balanced-feed type antenna (a 4:1 toroid balun is built in for balanced line). It measures a tiny 6 x 6 x 2½ inches! Meter light uses an optional 12 VDC supply.
